

World Without Water

The Effects of Water Pollution

Water Pollution Facts:

Up to 90%

There are between

12-18 million

cases of waterborne diseases each year in the United States – in developing countries, one-third of all hospital cases could be caused by contaminated water.

Across the planet, urban settlements are the main source of pollution, and more than

80% of wastewater is left untreated.

With population growth and climate change also adding stress to our finite supply of water, we can't afford to waste a drop by polluting it. Nearly two-thirds of the world's population could experience water scarcity by

2025

How Can We Stop Water Pollution?

Volunteering:

Find an organization or water collaborative in (or outside of) your community and volunteer to help. If there are no active groups, consider starting one.

Inform & Act:

The Environmental Protection Agency (EPA) also has a list of simple things you can do at home to stop water pollution. Visit their website to learn more.

Donating:

Your money can help fund research and projects to protect our waters. There are many great organizations whose mission is to provide clean drinking water to those in need.
